

LITE *series*

 **DAYSPRING**
HEALTH SCREENERS

Your health is a gift to yourself and your family. Dayspring's **LITE series** offers a comprehensive range of baseline tests to help you take a lead on your life and manage potential health risks. Early detection and intervention

The LITE series sheds light on key health indicators. **firstLITE**, **sunLITE** & **skyLITE** provide a comprehensive analysis of blood, liver and kidney functions. **sunLITE** & **skyLITE** options feature the inclusion of tests which unveil the 'silent killers'.

sunLITE's coverage includes an analysis of hepatitis A & B, thyroid function, liver, colon & lung tumour markers and exclusively for the gentlemen - prostate tumour markers and ladies - ovarian tumour markers. At the top of the series, **skyLITE** gives an all-important additional peek into indicators of the pancreatic and other major conditions which often present themselves as the 'top silent killers' and an additional stool analysis.

For those who are intent on enjoying their silver years, **silverLITE** is specially designed to provide comprehensive assessment of the health indicators that assist in ageing gracefully.

If you have recently completed a health screening exercise, and have not had the opportunity to include a scan of the key tumour markers, **dayLITE** will help you complete your health report for the year.

The characteristic warm Dayspring experience of a personal consultation with our Doctor to complete your screening experience is an option you can exercise too. * *terms and conditions apply.*

Dayspring Health Screeners is also happy to share the **LUXE** and **Love** series with you. They have been lovingly designed to meet your every need and we will be most delighted to explain their coverage if you are interested. Please give us a call on **6339 9339** for more information or SMS **9199 0123** for appointment.
